Subject: RFID tags project - New security measures for our terminals

To the attention of transport companies

Dear partners,

We wish to inform you that **as of Monday, April 7th, 2025**, tag detection will be monitored on trucks transiting at the entrance (ingate / stage 2) of our Maisonneuve (Section 68) and Viau (Section 52) terminals.

From this date onwards, Termont will be implementing measures to ensure the safety of truckers by prohibiting them from driving through the stacks to identify their containers.

At the same time, for loading service at RTG, drivers will be required to pass between the truck and the containers in order to move between the cab and the rear of the trailer.

Finally, for RTG unloading service, as for forklift service, you will be required to remain in your truck.

Please refer to the attached documents for more details.

If you have any questions about health and safety instructions:

Contact the Health and Safety Department

sse@termont.com

For all questions relating to tag installation:

Contact the Customer Experience Department

clerks@termont.com

514-254-0526

We are convinced that the implementation of these security measures throughout our terminals will contribute to a more efficient and safer supply chain, benefiting all members of our community.

Yours sincerely,

The Termont team
